

Isokinetic Heated probe

ISOTERM Thermoregulator Units

The ISOTERM thermoregulation devices are available in three different configurations that provide 1, 2 or 4 outputs.

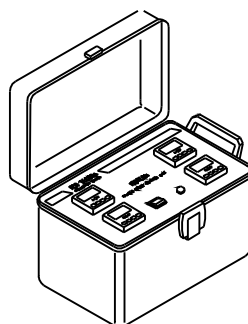

Through the electronic PID regulators it is possible to measure and control the heated temperature in a precise and effective way.

The connections are unified to allow the widest versatility of use.

In the 2 and 3 output models it is possible to insert alarm thresholds that activate a built-in sound and visual signal.

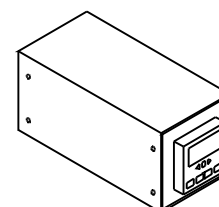

With these units it is possible to control:

- heated probes
- external filterholder box at the stack
- heated sampling lines
- wet gas meter

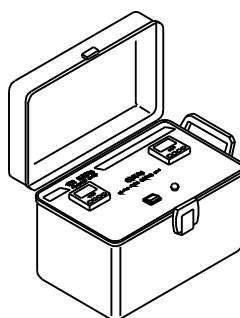

ISOTERM 4

P/N AC99-090-0090SP

ISOTERM 1

P/N AC99-090-0093SP

ISOTERM 2

P/N AC99-090-0094SP

Standard power cords:

Length	P/N
4 m	AC99-090-0091SP
8 m	AC99-090-0092SP
